

COVID-19 Daily Checklist

It is important to closely monitor your health and the health of those you care for to help prevent the spread of COVID-19 and other illnesses like the flu.

Vaccination is your best defense against COVID-19 and some other illnesses like the flu.

1 Do you feel sick?

If yes, stay home or put a mask on right away and go home. Keep doing healthy habits like washing your hands and coughing or sneezing into your elbow. Avoid school, work, child care settings and public spaces. Do not return until you feel better (without fever medications) for at least 24 hours. It's ok if you still have a mild cough or runny nose, unless you are in one of the situations below.

2 In the past 48 hours, have you had, or are you currently experiencing:

Cough (new or worsening)

OR two or more of the following symptoms (new or worsening);

Fever (i.e. chills/
sweats)

Sore
throat

Runny nose/
nasal congestion

Headache

Shortness
of breath

Nausea, diarrhea
or vomiting

If yes, go home or stay home as noted above. Follow [Public Health instructions](#) for testing and isolation.

3 Have you been outside Canada in the past 14 days?

If yes, check if you are required to [isolate after travel](#).

4 Have you been told that you are a close contact of someone with COVID-19?

If yes, follow [Public Health Instructions](#).

5 Have you tested positive for COVID-19?

If yes, follow [Public Health instructions](#).
